

leaf_pod

Dymitr Malcew

Polish designer, a graduate in architecture and urban planning at Gdańsk University of Technology.

The latest collection of furniture is a continuation of the cooperation between Dymitr and Bejot. Both Leaf Pod and the previously designed Treehouse, Beachhouse and Cave refer to nature. Due to their original shapes – a tree house, a beach basket and a cave – they evoke nice associations and serve to build a creative team.

Malcew's aspirations in his creative work are aimed at blurring the boundaries between office and home, work and rest, private and public space. This is also the case with the latest collection – Leaf Pod.

Leaf Pod

leaf_pod philosophy

It is said that work is a second home, mainly referring to the amount of time we spend at work. Just like at home, the office space should be properly arranged so that employees can perform their duties effectively. The aforementioned working time is a pretext to separate zones – for concentration, meetings, rest and meals.

The answer to these expectations is the new collection of Bejot office furniture designed by Dymitr Malcew. The designer was inspired by an enveloping leaf, which is reflected in the proposed style of the furniture set – its blurred, delicately rounded shapes bring to mind positive and warm associations. Particularly in open-plan offices, modules with partition walls are perfect for separating private space and organizing the surrounding space. An additional advantage of the collection is its good acoustic properties guaranteed by extensive wall surfaces and properly selected upholstery materials, available in warm and cool colours.

The collection has been designed in such a way that it is possible to connect individual modules, thanks to which it is possible to separate as many as 3 different zones, including work, collaboration, recharge, each consisting of enveloping shapes and an open, natural space.

RECHARGE

COLLABORATION

WORK

work

An open-plan office with a private space for individual work is no longer a dream, but a reality at your fingertips. Various modules, including the ones made of partition walls and a roof (with good acoustic properties), desks or sofas, can be freely combined to create a place conducive to increased concentration.

The work zone designed by Dymitr Malcew, created mainly for working in silence, is full of new ideas and original implementations. A space with an original appearance, high-quality workmanship and ergonomics, is essential today in every modern office – also in yours.

collaboration

The key to success in business is a well-coordinated team that can talk to each other. That is why Bejot has gone a step further. Now meetings do not have to be held only in closed spaces, which are not always conducive to creativity. The new collection of office furniture allows you to combine modules as needed.

Brainstorming is best done on couches facing each other, so that everyone can see and hear the conversation participants perfectly. The progress of a project, which requires concentration, can be checked in a zone separated from the rest of the office by a wall with a roof, where there is also a table and a sofa. There are many possibilities.

recharge

Occupational hygiene also means the ability to rest. Inhale – exhale... It's good to take a deep breath. The mind calms down, the body relaxes. The relaxation zone is a place where you can stop for a moment, not think about your duties or, under favorable circumstances, consider solving a pressing problem.

It is a place of regeneration, balance between rest and working at full capacity. What matters is here and now. Modules of any configuration, consisting of sofas and a couch, organize an informal office zone where everyone can feel at ease.

acoustic properties

attenuation absorption

Leaf_pod walls mark places of workstations and meetings, additionally ensuring high sound attenuation parameters. It is a significant parameter when choosing partition walls, because acoustic waves propagate into the remaining areas of the office to a lesser extent, and the range of audibility of conversations is reduced. This allows for effective work, maintaining a state of high concentration, as well as for comfortable meetings.

The structure is covered with a special, flame-retardant, sound-absorbing non-woven fabric, which effectively reduces the noise level in the office and reduces the reverberation time. The sound-absorbing material used in the Leaf Pod construction, thanks to its large surface, can effectively replace several wall panels.

measurement of the sound absorption coefficient in a reverberation chamber according to PN-EN ISO 354:2005, ISO 20189:2018*

* tests for sample of leaf_pod panel 1600x650x30. The result may vary depending on the fabric selected.

panel cross-section

A B C B A

- A fabric
- B acoustic non-woven fabric
- C insulating core

Arrangement of desks in an open space office without acoustic solutions.

Acoustic waves spread without any obstacles, there is noise in the office, conversations are heard even at a great distance – this fact has a negative impact on the concentration of office users.

Arrangement of desks in an open space office with Leaf Pod acoustic walls.

The walls of the Leaf Pod structure are an effective obstacle on the path of acoustic waves – the noise level is lower, conversations propagate to other work stations to a lesser extent. The office is quieter and its users can work in full concentration.
